TEACH YOURSELF INTERMEDIATE XII UNIT 6

Entrepreneurship in the Digital Age

Ideas, prototypes, and MVP

What you will master

- Turn problems into business ideas with local examples
- Differentiate low/mid/high-fidelity prototypes
- Define MVP and test riskiest assumptions
- Plan features, cost, marketing, and beachhead market

How to use these notes

- Read one section, then close the book and explain it aloud.
- Do every *Try it* box before moving on.
- Memorize tables and truth patterns — exams love them.

6.1 Entrepreneur mindset

An **entrepreneur** spots problems and builds solutions that create value. Digital tools lower cost to test ideas (websites, social ads, no-code apps).

6.2 Prototypes

Fidelity	What it is	When to use
Low	Paper sketches	Early feedback, fast
Mid	Clickable wireframes	Test flows
High	Near-real UI	Usability before build

6.3 MVP & learning loop

Minimum Viable Product — smallest version that tests your riskiest assumption (will users pay? will they return?). Collect feedback → iterate.

Plan: core features, rough cost, marketing channel, **beachhead market** (first focused customer group).

Try it

Pick a campus problem; write one-sentence value proposition and three MVP features only.

Teach Yourself — Practice & Check

1. Compare prototype vs MVP for a tutoring app.
2. Name your riskiest assumption and how to test it in one week.
